

Flutter Radio Button

Tushar B. Kute,
<http://tusharkute.com>

Radio Button

- A radio button is also known as the options button which holds the Boolean value.
- It allows the user to choose only one option from a predefined set of options.
- This feature makes it different from a checkbox where we can select more than one option and the unselected state to be restored.
- We can arrange the radio button in a group of two or more and displayed on the screen as circular holes with white space (for unselected) or a dot (for selected).

Radio Button

- We can also provide a label for each corresponding radio button describing the choice that the radio button represents.
- A radio button can be selected by clicking the mouse on the circular hole or using a keyboard shortcut.

Example

```
ListTile(  
  title: const Text('www.google.com'),  
  leading: Radio(  
    value: BestSearchEngine.google,  
    groupValue: _site,  
    onChanged: (BestSearchEngine value) {  
      setState(() {  
        _site = value;  
      });  
    },  
  ),  
),
```

Thank you
